Re: Centron Diesel Fuel Saver and Centron Gasoline Fuel Saver classified as Combustible liquids not flammable liquids.

Both of these products have a flash point of greater than 100 F and less than 140 F at approximately 106 F.

Under the Transportation 49CFR 173.120 (a) (2) a material at or above 100 F may be reclassified as a combustible liquid.

Under the NFPA Fire Codes section 704 a combustible liquid- class II is defined as flash point 100 F to 140 F.
